

**FOR IMMEDIATE RELEASE:**

### **New Tactical Data Link Training Course Offerings**

NCS has recently added three new Tactical Data Link (TDL) training courses to their list of training courses and programs. NCS now offers 55 TDL specific training courses and programs that are available for on-site, web-based, or Computer Based Training.

The three new courses; OPTASK Link Expert-1 (OTL / E Level-1), OPTASK Link Expert-2 (OTL / E Level-2), and Radiation Restrictions / Frequency Management Expert (FRQ / E Level-1) were developed in response to demands from the operational community to provide hands-on training for some of their existing courses. The OPTASK Link Expert-2 and Radiation Restrictions / Frequency Management Expert courses are integral parts of the NATO Interface Control Officer (NICO) Training Program, which is used by several nations to train their Data Link Management Centre (DLMC) staff.

For more information about these or any of our training courses please visit our website ([www.network-centric.com](http://www.network-centric.com)) or email [director@network-centric.com](mailto:director@network-centric.com).
