

**FOR IMMEDIATE RELEASE:**

### **Web-Based Open Training Courses**

NCS announces that it will be offering three of its Tactical Data Link (TDL) training courses as open courses for its upcoming web-based training schedule. The three courses will be; Link 16 / JTIDS / MIDS Intermediate (L16 / F Level-3), OPTASK Link Expert-1 (OTL / E Level-1), and Radiation Restrictions / Frequency Management Expert (FRQ / E Level-1).

The Link 16 / JTIDS / MIDS Intermediate course is our most popular training course and the most requested for web-based training. The OPTASK Link Expert-1 and Radiation Restrictions / Frequency Management Expert courses employ hands-on training that has been specifically developed to support distance learning formats (e.g. web-based training). The hands-on training for these topics help ensure that the complex information presented in the course is fully understood.

All three training courses will available for open signup. Open training courses are used to help ensure that high quality training is available to organizations and individuals with limited training budgets. The schedule for the web-based training is listed below.

- Link 16 / JTIDS / MIDS Intermediate (L16 / F Level-3) – 25-26 April 2011
- OPTASK Link Expert-1 (OTL / E Level-1) – 27-28 April 2011
- Radiation Restrictions / Frequency Management Expert (FRQ / E Level-1) – 2-3 May 2011

For more information about these or any of our training courses please visit our website ([www.network-centric.com](http://www.network-centric.com)) or email [director@network-centric.com](mailto:director@network-centric.com).
